## **DETAILED ACTION**

Applicants' arguments, filed 8/4/03, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

## **NEW MATTER**

Claims 55, 56, 58-72, 74-87, and 99-102 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

NEW MATTER has been amended into the claims via the claim amending, filed 8/4/03. Instant claim 55 has been amended to require the generating of virtual compounds according to thermodynamic property "and at least one criteria selected from...". This limitation wherein said generating is practiced via the combination of thermodynamic property "and" the listed properties to control the generating step in claim 55 has not been found as filed regarding written basis. For example, thermodynamic property is utilized as described in the specification as filed on page 16, line 26, through page 19, line 6, with certain other criteria but none of them are those listed in claim 55. The remaining citations pointed to by applicants on pages 20-22 and FIGS. 7, 8, and 9 also fail to supply written basis for said combination(s) of criteria.

Thus, the combining of thermodynamic property criteria as amended into claim 55 is NEW MATTER. Additionally, the phrase "and combinations thereof" as added in claim 55, lines 4-5, has not been found as filed. This lack of written basis for these limitations as described above supports this NEW MATTER rejection. The above noted NEW MATTER is also present in independent claims 56, 58-60, 62-67, 69-72, 74, 75, 78-82, 85-87, 99-102, as well as claims dependent directly or indirectly from these independent claims via their dependence. This rejection is necessitated by amendment.

#### PRIOR ART

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 55, 56, 58-72, 74-87, and 99-102 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agrafiotis et al. (P/N 5,463,564); taken in view of Uhlmann et al. (1990); taken further in view of Dower et al. (P/N 5,639,603); taken further in view of either of Haff et al. (P/N 5,720,923) or Harris et al. (P/N 5,650,122).

This rejection is maintained and reiterated from the previous office action, mailed 5/9/03. Applicants firstly argue that Agrafiotis et al. fails to disclose a method of generating or evaluating a virtual compound *in silico*. In response this argument was specifically responded to in the previous office action, mailed 5/9/03, as being non-persuasive due to specific disclosure in Agrafiotis et al. which clearly does describe both virtual *in silico* compound generation as well as evaluation for “new leads”. Applicants argument is purely an allegation without any factual basis which is directed to the specific factual basis which has previously been set forth regarding this limitation. Thus, this argument is again non-persuasive. It is noted that this rejection is further argued only regarding the newly added claim limitations which have been noted above as being NEW MATTER. This rejection is therefore maintained in anticipation of removal of said NEW MATTER thus leaving the claims rejected as before.
